

**DESCRIPTION:** Coil Loop Protectors are made of durable plastic for multi-use applications. They are designed to install precast coil inserts into concrete forms. Because they simply nail to the form, they save the forming lumber from large holes having to be drilled. Once removed, the insert can receive a coil bolt with ample room past the coil to achieve maximum pull strength.

**APPLICATION:** Coil Loop Protectors need to be dipped in a concrete form retarder first, to insure they can be removed without damage. Then they are nailed to the inside of the precast form lumber. The precast coil insert is then screwed onto the Loop Protector. After forms are stripped, the Coil Loop Protectors can be removed, and reused again.

**PRODUCT CODE:** LPPR12      1/2"  
LPPR34      3/4"  
LPPR10      1"
