

FEMALE SCREED POST

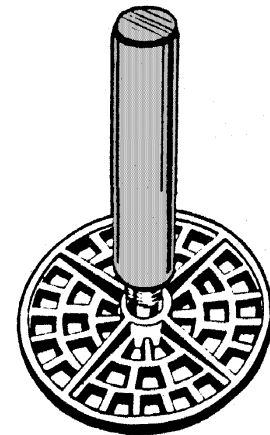

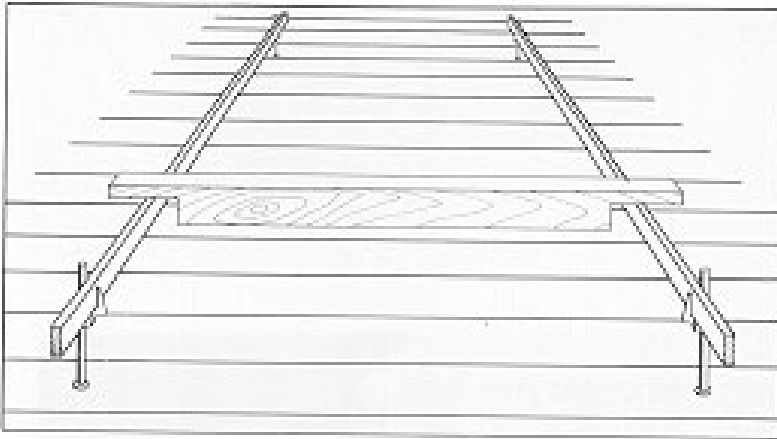

TECHNICAL DATA SHEET

DESCRIPTION:

Screed Pad Posts are made from 3/4" round steel and tapped with a 1/2" N.C. thread in one end.

APPLICATION:

Screed Posts are used in concrete screeding applications. They can be used on plywood, concrete, or steel deck pours. They can be secured by either screws or constructive adhesive. Their non-rusting quality makes this a great system for overhead deck pours.
