

METAL FORM PATCHES

TECHNICAL DATA SHEET

DESCRIPTION:

Metal Form Patches are used to cover unnecessary drilled holes in form ply to prevent grout leakage. They come in three different sizes: 1-3/4", 2-1/4", and 2-3/4" diameters.

APPLICATION:

Metal Form Patches are applied by hammer or magnetic setting tools. The sharp spikes on the patched stick into the ply form like nails. Metal Form Patches should be applied on the inside of the ply form so they will stay in place during concrete pour.

- MAGNETIC SETTING TOOL ALSO AVAILABLE
