

A-BRACKET

TECHNICAL DATA SHEET

DESCRIPTION:

The A-Bracket is made from high strength steel with a plated cam, and a full connection weld. A-Brackets are durable and stand up very well to typical jobsite conditions, allowing the contractor to reuse the brackets.

APPLICATION:

To be used on standard 3M strength, button head snapties. Designed for conventional single waler, poured-in-place concrete forms. They will accept standard 2x4 lumber. A-Brackets allow the user to build a concrete wall form with no nailing of the plywood to the 2x4 walers, which saves time and money. In addition, stripping the form is made much easier because the brackets are one piece and are simple to remove.

PRODUCT CODE	WEIGHT	PACKAGED
ABRKT	1.4 LBS. EACH	50/ BOX, 1,800 / PALLET
2,250 LBS. SAFE WORKING LOAD IS APPROX. BASED ON A 2:1 SAFETY FACTOR
