

# FORM ALIGNER BRACES

## TECHNICAL DATA SHEET

### DESCRIPTION:

The Form Aligner Brace is a turnbuckle brace used to align concrete wall and column forms. Made with 1" Coil-thread parts, this aligner is easy to adjust and low maintenance. It adjusts from approximately 36" to 40".

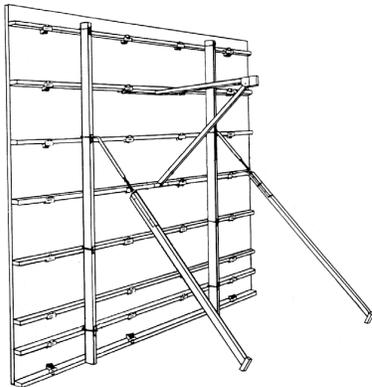

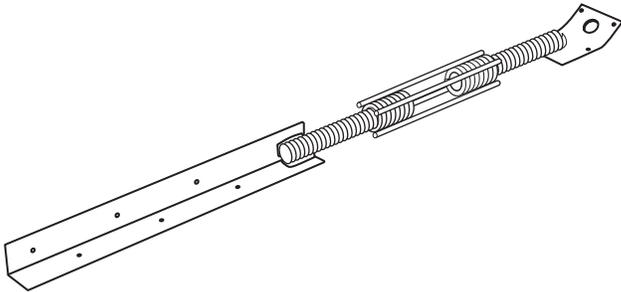

### APPLICATION:

Form Aligner Braces attach to one side of the form by the nails at the top, or 3/4" or 7/8" stakes at the bottom, using standard jobsite lumber. Typical spacing is 6ft. on center.
