

CONCRETE TIE PLUGS

TECHNICAL DATA SHEET

DESCRIPTION:

Concrete Snaptie Plugs. Made from hi-strength grout, concrete plugs come in a standard concrete gray color. They fit flush into the holes in concrete poured-in-place walls left by a standard 1"x1" plastic cone.

APPLICATION:

Concrete Plugs should be dipped in concrete bonder or epoxy for adequate bonding to hole left by 1" X 1" Snaptie Cone. They can be left exposed or patched over. Using concrete plugs can cut down on a sack and patch time, as well as preventing rust lines from streaking down the wall from exposed rusted Snaptie Ends.
