

FIT UP NUT & BOLT

TECHNICAL DATA SHEET

DESCRIPTION:

Fit Up Bolts have a tapered nose that acts as a draft pin to help align the forms.

Fit Up Nuts are used to fasten the Fit Up Bolts to the steel form panels.

APPLICATION:

Fit Up Bolts, also known as Speed Bolts, are used in highway construction to secure steel form panels together. The tapered nose of the bolt acts as a draft pin, aiding in the alignment of the steel panels. The threading design and appropriate gaps between the nut and the Fit Up Bolt enables swift and convenient assembly and disassembly of the structure. The thread design allows for easy removal of concrete between threads.

Fit Up Nuts are used to accompany Fit Up Bolts. These nuts are constructed with an increased height, allowing for enhanced thread engagement and improved strength. Purposely made to be used with 3/4" diameter Fit Up Bolts.

Part No.	Size	Weight	Packaged	Grade
FITBLT	3/4" X 2"	0.35/ea	125/box	ASTM A325
FITBLT4	3/4" X 4"	0.60/ea	75/box	ASTM A325
FITNUT	3/4"	0.15/ea	250/box	ASTM A563 C
