

SMOOTH DOWELS

TECHNICAL DATA SHEET

DESCRIPTION:

Made from melted steel, Smooth Dowels are saw-cut to common sizes (1/2", 5/8", 3/4", 1", 1-1/4", and 1-1/2"). Custom sizes are available upon request. Smooth Dowels can be plain, painted, or epoxy coated. Used in conjunction with metal or plastic dowel caps.

APPLICATION:

Smooth Dowels are placed in concrete to increase load transfer across the joints. This allows for maintaining vertical alignment of the joints when weather or moisture changes are present, allowing for less stress in the concrete slabs.
